

Web Based Email Program

12.26.2020

Names and IDs :

Ahmed Gamal Mahmoud Hefny (18010083)

Ahmed Yasser Mohamed Mohamed Elqotb (18010276)

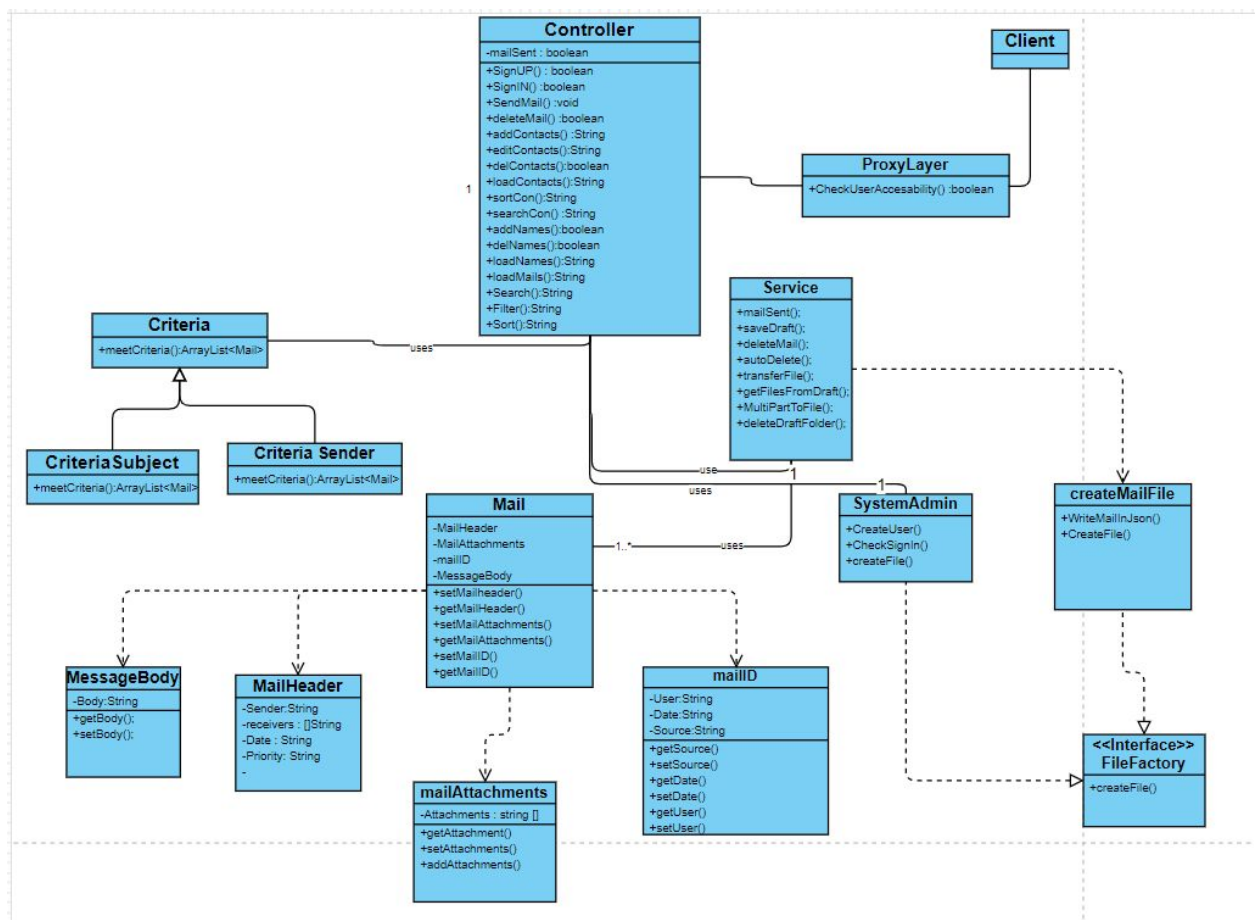

Marwan mohamed saad abougabal (18011736)

Mohamed Mofreh Elgazar (18011626)

How to run the code :

1. Open the backend folder in your IDE
2. In your IDE , Go to src > main > java > Main > DemoApplication.java
3. Run DemoApplication.java
4. Then open the frontend folder through IDE or vscode
5. Open the terminal and type "npm run serve" and wait until it runs
6. Open your browser and type "localhost:8080" and the web should run

UML Diagram

Design Patterns usage description

1- Proxy Pattern :

This pattern plays an important role in keeping the server secure as it rejects any request from unregistered users to use its features such as sending emails , adding contacts .

2- Factory Method :

Created an interface that has a method called createFile and made each concrete class needed to create files with extra manipulations to implement this method the way required it . I used it as the example of pizza store in Head First book .

3- Facade Pattern :

This pattern was used to create the mail object as it needed to consist of other objects to facilitate operations on it especially in frontEnd and got the idea from the example in Doctor's lecture .

4- Singleton Pattern :

This design pattern is used in SystemAdmin class as It requires only one instance to handle main system operations instead of creating new Instances as creation of SystemAdmin object costs time and to avoid using it twice in same time to handle the calls that need time doing by it .

5- Filter Pattern :

We used this pattern in filtering mails in a specific folder according to subject or sender. Even users can do double filter by filtering according to both subject and sender .

Decisions and Assumptions

- I. In order to view sent attachments , you must click on it and it will be downloaded in your downloads directory.
- II. Passwords shouldn't be less than 8 characters.
- III. You can't sign up an account unless you fill all the required data.
- IV. Email address for the project must be in the format : example@mail.com
- V. Mail Server can contain up to 10 mails per page
- VI. In order to send email to multiple receivers , You must separate their email address by a ","
- VII. You can upload any type of attachments
- VIII. ATTENTION : Maximum size of the attachments is 1 GigaByte , and if the size exceeded 20 MB it will take a few seconds to send the mail ^_^
- IX. When searching by priority , User must type exactly (Superhigh , high , medium , low)
- X. When applying search and filter in (inbox , trash , sent , draft) , User must enter the full word that he wants to search or filter for BUT in case of searching in (contacts) > User can search by one character or half a word or a full word.
- XI. Every email has its own color according to priority decided [Superhigh : red / high : blue / medium : yellow / low : green]
- XII. You can travel through inbox and trash and other files through Menu bar at the top right OR through the drawer at the top left
- XIII. Filter is applied to Sender OR subject OR both sender and subject
- XIV. Search is applied to Sender / Subject / Priority
- XV. Sort is applied to Sender / Subject / Priority and Date
- XVI. By default emails are sorted according to date from newest to oldest , If changed to priority then it will be sorted from Super High to low , Incase of sender and subject it is sorted from a → z.
- XVII. Delete can be done to single or multiple selected mails
- XVIII. In draft mails , If there are any attachments drafted with the mail then it will appear to the user when he decides to RESEND these mails again, also allowed to remove some of these attachments if he want. he will be able to add new attachments alongside the old attachments.
- XIX. In draft mails , If any data was assigned to the mail , Then it will be loaded when the user decided to send these emails again

How to use the Application

After Opening the program as mentioned before in “ How to run the code “ part , You shall find yourself in a web page containing Sign in form ..

ATTENTION : if you want to open already made account with testing (username : ahmed.gamal@mail.com // password : 12345678)

ALSO : if you want to open any pre-existing account , kindly go to backend folder then to System folder then choose any email (example@mail.com-password) in this form.

1. If you want to sign in, fill data of email and password correctly and then push the sign in button.
2. If you don't have an email, click on sign up button and create a new email after filling all data sign up button will be available , push it.
3. After that you will be in the inbox page.
4. You have a toolbar in the top of page and it has many function
5. You have menu in left that shows your email , compose button and pages you can move to (inbox,sent,trash,draft,contacts)
6. On the other side of the toolbar you will find the name of the current page , a menu that has pages you can move to (inbox,sent,trash,draft,contacts) and sign out button if you want to sign out .
7. If you want to send/draft an email click on compose button , a popup will be shown ,
In case of send you must fill all data except attachments , in case of draft you should fill at least one of data otherwise nothing is saved.
8. In inbox you will have a search/filter toolbar click on menu , choose search or filter , choose the type of search or filter then a text field will appear then type what you want , if you want to done click on “Right” button , if you want to cancel click on cancel button.
9. If you have emails you can click on it and it will be shown , if you have an attachment you can click on it and it will be downloaded then if you want to close ok click on ok button.
10. If you want to delete an email click on the checkbox , when you click on at least one checkbox a toolbar will be shown , you can select more than one email , if you want to delete click on delete button , if you want to cancel click on close button.
11. If you want to sort your emails click on sort by button and you will have a menu to choose thing you want to sort by.
12. If you want to refresh the page click on the refresh button.
13. If you want to go to the next or previous page click on their buttons as each page has at most 10 mails.

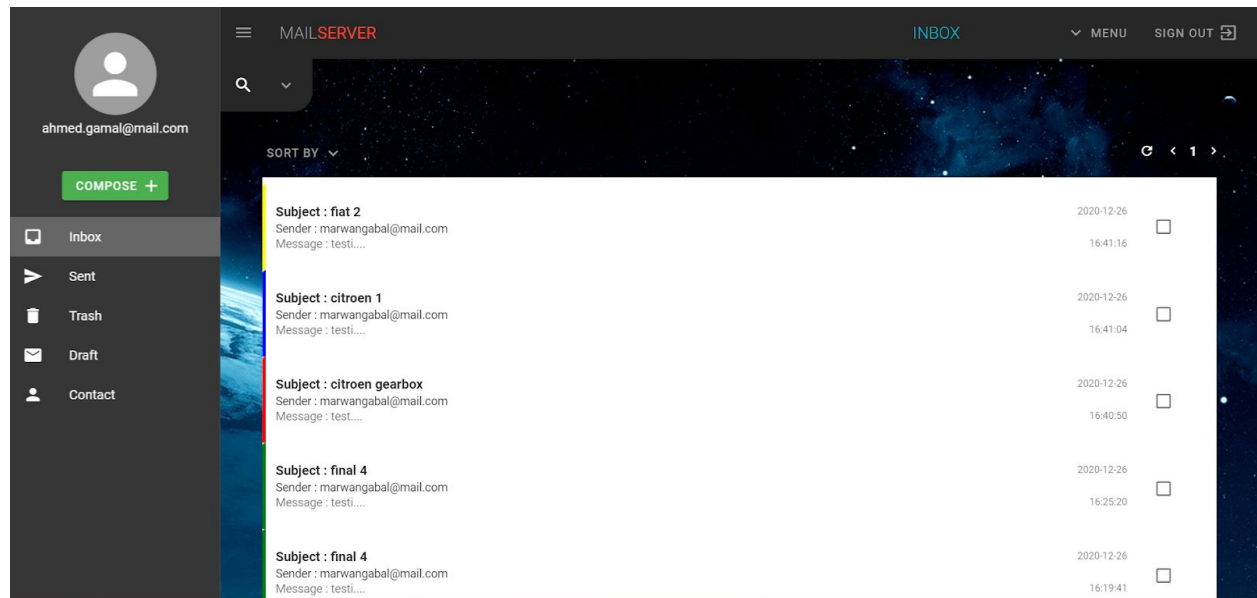

14. And so in sent ,trash , draft.
15. Except in draft if you click on a mail , send/draft popup will appear with data you have filled before , if there are old attachments you will see it and if you want to cancel one of them you can , there is no search or filter in Draft.
16. In Contacts, if you want to add new contact click on add new contact and fill data.
17. If you want to open contact click on it and popup will appear then you can close , edit contact name and add new email.
18. You can delete contacts the same as in inbox.
19. You can sort ascending or descending , refresh contacts and move between pages
20. You can search in contact to click on the search checkbox then type what you want to search for.

After signing in:

Signing up:

The registration form is centered on a background of a blue planet horizon against a starry space sky. The form itself has a dark brick header with a glowing red 'OPEN' sign. Below this, the form fields are white with dark text and icons. The fields are: First Name (marwan), Last Name (abougabal), E-mail (abougabal@mail.com), Password (12345678), and a date field (2020-12-26). A green 'SIGN UP' button is at the bottom.

Sort Contact:

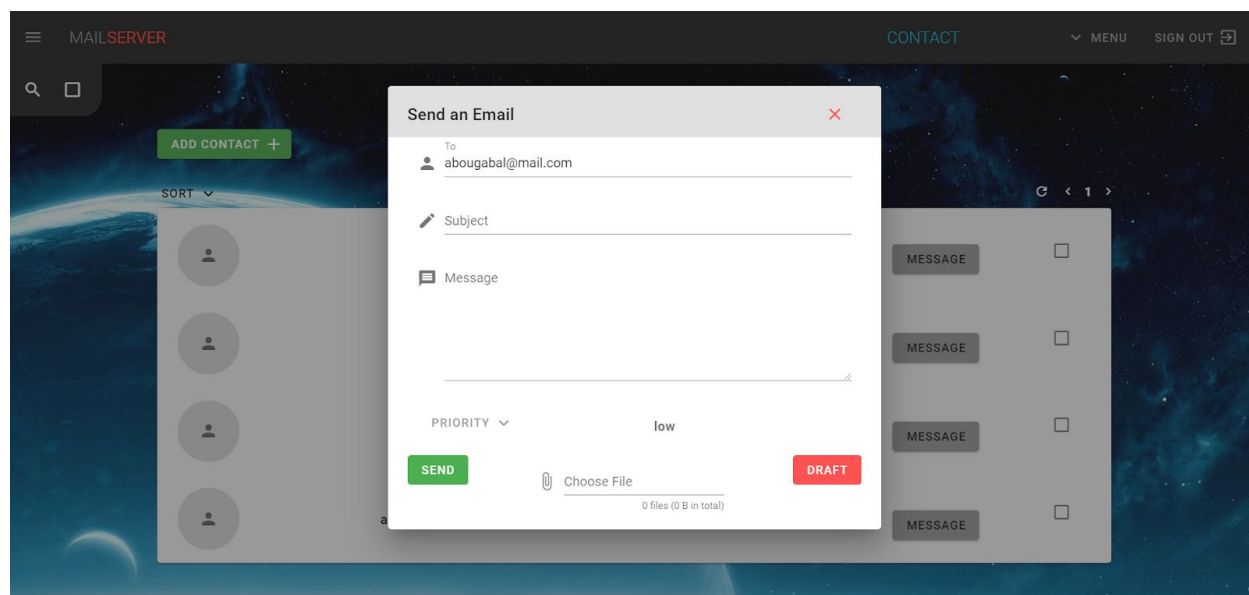

The screenshot shows the MAILSERVER CONTACT page. The header includes a hamburger menu, the text "MAILSERVER", the word "CONTACT" in blue, and links for "MENU" and "SIGN OUT". A search bar is on the left. A green "ADD CONTACT +" button is at the top left of the contact list. A "SORT" dropdown menu is open, showing "Ascending" (selected) and "Descending". The contact list contains four entries, each with a person icon, a name, a "MESSAGE" button, and a checkbox. The contacts are sorted alphabetically by name in ascending order.

Icon	Name	Action	Checkbox
	ahmed yasser	MESSAGE	<input type="checkbox"/>
	gabal	MESSAGE	<input type="checkbox"/>
	gazzar	MESSAGE	<input type="checkbox"/>
	marwan	MESSAGE	<input type="checkbox"/>

The screenshot shows the MAILSERVER CONTACT page with the same header and search bar. The "SORT" dropdown menu is still open, showing "Ascending" and "Descending". The contact list now shows the same four contacts, but they are sorted alphabetically by name in descending order.

Icon	Name	Action	Checkbox
	marwan	MESSAGE	<input type="checkbox"/>
	gazzar	MESSAGE	<input type="checkbox"/>
	gabal	MESSAGE	<input type="checkbox"/>
	ahmed yasser	MESSAGE	<input type="checkbox"/>
